

ATF DX II

Description

Petromark Automatic Transmission Fluid is blended using a high viscosity index paraffinic base oil. Blended to a Dexron Type II fluid this product includes, viscosity index improvers, anti-wear additives, dispersants, anti-oxidants and seal swell agents. This fluid is red in colour preventing any error when filling or top-up of transmissions.

Applications

The primary application of ATF is the automatic transmission of passenger vehicles, certain commercial and off-highway equipment where ATF type fluid is recommended by the manufacturers.

Performance

- Meets the requirements of:
- Allison C-4
- CAT TO-2
- Dexron II
- Mercon
- Denison HF-0

Advantages

- Excellent protection against wear and corrosion
- Protection against high-temperature deposits and sludge
- Excellent lubrication at both low and high temperatures
- Full performance as a result of foam-resistance
